

MobiLever®

ESX MOBILE WORK POSITIONERS

Bishamon®

Bishamon ESX Series MobiLever® work positioners are fully adjustable, weight sensitive, self-leveling scissor tables with push-bars and casters. ESX Series work positioners provide improved ergonomics, productivity and efficiency by automatically raising and lowering during loading and unloading so the worker does not have to stoop, bend or strain.

As the load weight changes, the ESX either raises or lowers, keeping the top of the load at a convenient height. The springs can easily be adjusted to accommodate load ranges without the need to change springs. Automatic placement of the load at a convenient work height while providing the mobility to locate the lift where it is needed makes the ESX a valuable ergonomic tool for your facility.

ESX work positioners are available in two weight capacities and table sizes to satisfy a wide variety of applications. The MobiLever® is ideal for pick-and-place operation or any other procedure where materials are being off loaded and later reloaded. Typical applications are found throughout the manufacturing, processing and distribution sectors wherever worker fatigue or damage to sensitive products can be reduced.
