## INTRODUCTION

This manual contains information to acquaint you with the safe and proper installation, use and upkeep of the machine. You should ensure that this manual is available to personnel working with the machine and require its use by these personnel.

In the interest of safety, please read this entire manual carefully and be familiar with its contents before you install, use or service the machine. If you have any questions about any instructions in this manual, please contact your dealer or Southworth Products Corp.

Southworth's product warranty is provided in the back of this manual. This instruction manual is not intended to be or to create any other warranty, expressed or implied, including any implied warranty of merchantability or fitness for a particular purpose, all of which are hereby expressly excluded.

As set forth more specifically in the product warranty, Southworth's obligation under that warranty is limited to the repair or replacement of defective components, which shall be the buyer's sole remedy. Southworth shall not be liable for any loss, injury or damage to persons or property, not for any defect, indirect or consequential damage of any kind resulting from the lift table.

### Things to Know

1.) Capacity on pneumatic lift/tilt tables is affected by plant air psi (pounds per square inch of pressure).

2.) Plant air pressure is typically 80 to 90 psi.

3.) Speed on lift/tilt tables is affected by the cfm available (cubic feet per minute or air volume flow).

4.) The cfm is a function of the air compressor's capacity and the pressure and the size of the lines leading to the lift/tilt table.

5.) The cfm is best expressed as "free air." Meaning it is measured (or calculated) as a volume blowing out an open line.

6.) Southworth capacity ratings and speed estimates on all models are based on 80 psi at 80 cfm, free air.

### As a General Rule

1.) Increasing cfm will increase up speed.

2.) Increasing psi will increase capacity and up speed.

3.) Capacity and speed are a function of the air compressor and the associated airline network, not the equipment.

4.) If a pneumatic lift/tilt is not fully raised or lowered and a load is removed from the unit, the unit will raise slightly as the pressure on the air inside the airbag is reduced.

5.) If a pneumatic lift/tilt is not fully raised or lowered and a load is put on the unit, the unit will lower slightly as the air is compressed inside the airbag.

## RISE TIMES

Pneumatic lifts/tilts are directly affected by weight that is on the platform.  
 Pressure compensation, such as we use on hydraulic machines is not applicable.  
 The following chart should be helpful. These speeds are all approximate.

<u>CONDITION</u>	<u>LIFT</u>	<u>TILTER</u>
RAISE-LOADED	30 SECONDS	20 SECONDS
LOWER-EMPTY	30 SECONDS	30 SECONDS
RAISE-EMPTY	15 SECONDS	15 SECONDS
LOWER-LOADED	15 SECONDS	20 SECONDS

## SAFETY

The safety of all persons operating, maintaining, repairing or in the vicinity of the machine is of paramount concern to Southworth. This is a powerful machine with moving parts and is capable of causing personal injury if proper precautions are not taken. Therefore, throughout this manual, Southworth has identified certain hazards that may occur in the use of this machine and provided appropriate instruction or precautions that should be taken to avoid these hazards. In some cases, Southworth has also pointed out the consequences that may occur if Southworth's instructions or precautions are not followed. Southworth uses the following system of identifying the severity of the hazards associated with its products.

Southworth pneumatic lift/tilt tables are equipped with a pressure safety relief valve so overloading will not "burst" the air bag.

Southworth pneumatic lift/tilt tables have a safety orifice speed control. This regulates the down speed. Should an air line rupture, the unit will descent at about the normal rate. This orifice is not adjustable.

All Southworth pneumatic lift/tilt tables can be fitted (optional) with industrial, high quality dampers to provide smooth movement even when loads are abruptly introduced to the platform.

Southworth units are also equipped with safe, reliable Firestone air spring actuators rather than vinyl air bags.

All Southworth models are designed with a generous safety factor of three to one.

### Safety Considerations

Southworth pneumatic lift/tilt tables are designed and manufactured to meet the safety requirements of the *ANSI Standard MH29*.

#### SIGNAL WORD

The word or words that designates a degree or level of hazard seriousness. The signal words for product safety signs are "**DANGER, WARNING and CAUTION.**"

**"DANGER"** Immediate hazard which will result in severe personal injury or death.

**"WARNING"** Hazardous or unsafe practice which could result in severe personal injury or death.

**"CAUTION"** Hazardous or unsafe practice that could result in minor personal injury or property damage.

Please read and follow the instructions in this manual, including all safety instructions and precautions carefully and completely

## Safe Servicing of the Lift

### WARNING !

Only authorized personnel should perform inspection or maintenance and service procedures. Unauthorized personnel attempting these procedures do so at the risk of severe injury or death.

### DANGER !

Failure to properly adhere to lift blocking procedures is to risk the sudden and uncontrolled descent of the lift during maintenance or inspection. A falling lift can cause severe injury or death.

This procedure describes the only factory-approved method of working under a lift. Follow these instructions **EVERY** time you plan to reach or crawl beneath the lift to perform service or maintenance – no matter how momentary that might be.

If the factory-provided maintenance device is damaged or missing, stop immediately and consult the factory for assistance. The manufacturer is not liable for your failure to use the approved maintenance device(s) and procedures that have been provided.

1. Any load must be removed from the lift prior to engaging the maintenance device(s). These devices are designed to support an unloaded lift only. Failure to remove the load from the lift prior to blocking could cause the failure of the maintenance device(s) and allow the lift to fall unexpectedly. This can result in personal injury or death, or permanent damage to the maintenance device(s) and/or the lift.

2. Raise the lift to its fully raised position. If you do not, the maintenance device(s) may not be able to be placed properly in its/their designed blocking position.

3. Remove the maintenance device(s) from its/their storage location and place it/them into the engaged position as shown in Figure 1. (Note: further information may be useful here to provide additional instructions as to the location and method of storage and engaged positions).

4. Lower the lift until it makes complete contact with the maintenance device(s). Re-check to ensure that all provided devices are fully and

Figure 1 - Safe Servicing of Lift

securely engaged. If the device(s) is/are not fully engaged the lift could fall unexpectedly, resulting in permanent damage to the device(s) or the lift.

### DANGER !

If for any reason you are unable to lower the lift completely onto the maintenance device(s), stop immediately and consult the factory. Failure to properly use the factory approved maintenance device(s) could result in severe injury or death.

5. (For single-acting hydraulic, and pneumatic lifts) Once the maintenance device(s) is/are properly and securely engaged, continue to press the down button, valve or switch for an additional 5-10 seconds to relieve all pressure in the operating system (add more specifics here as required for pneumatic lifts).

### WARNING !

Failure to relieve operating system pressure could result in the sudden and unexpected release of high pressure fluids (or air) during maintenance and/or repair of the lift and result in severe injury or death.

6. Follow OSHA lock-out/tag-out procedures. Disconnect and tag all power sources to prevent an unplanned or unexpected actuation of the lift.

7. Once inspection or work is complete, reverse the performance of the steps above to raise the lift off the maintenance device(s) and place the device(s) back into its/their designated storage position(s).

## INSTALLATION INSTRUCTIONS

### Preparations:

1. Before you start to install the lift, check for local codes and ordinances which may apply in your area. It is your responsibility to obtain any necessary permits.
2. Read all of these installation instructions carefully. Be sure to read and understand all of the warnings!
3. Prepare air supply to have filter regular that provides psi.

### Positioning the lift:

1. Remove the shipping material and unskid the lift.
2. Move the lift into position, supporting the base frame of the lift. Mount the lift on a firm level surface and, if necessary, insert shims to level the lift. Install lag bolts to hold the lift in place. Make sure to shim or grout under the base frame to prevent any flexing.

#### **WARNING!**

**If the lift is mounted on an unstable surface, it may tip over when in use. You may be hurt and the lift and/or load may be damaged.**

### Air Line: (if equipped)

Connect airline between actuator device and supply lines.

#### **WARNING!**

**Be sure the air line will not be pinched by the lift during operation. If you allow the line to be pinched, the lift may not work properly. A hose may break, the lift may drop suddenly and someone may be hurt.**

### Testing

1. Check all connections and make sure that they are tight and do not leak air.
2. Clear the area around the lift. Remove any loose wires, lumber or other material which might get in the way of the lift as it is in use.
3. Operate the lift through its full range of travel. The lift should rise and lower smoothly and quietly. Raise and lower the lift a few times to check the clearances around the lift table.

#### **WARNING!**

**As the lift moves, “pinch points” are created. If you are standing too close to the lift when it is moving, your arm or leg may be caught in the moving parts and you may be hurt. Stay away from the pinch points when the lift is moving.**

### Complete Installation

1. Test the lift with the rated load. If the lift does not move contact Southworth for instructions.

#### **WARNING!**

**Do not continue to use the lift if this happens. This can cause the lift to fail suddenly and you may be hurt.**

## MAINTENANCE

All service should be done by qualified personnel. Qualified personnel should be able to read and understand wiring and pneumatic diagrams. They should be able to troubleshoot live pneumatic circuits safely and in accordance with accepted practice. **FOR SAFETY'S SAKE**, if in doubt, please contact your dealer or Southworth Products Corporation Customer Service Department at (207)878-0700 or (800)743-1000.

Before servicing the lift, read and understand this entire section and the section entitled "Operating Instructions."

### Hazards

There are several hazards you should be aware of as you service the lift:

Before working on the lift be sure to insert and all maintenance devices.

#### **WARNING!**

**As the lift moves, "pinch points" are created. Keep hands, feet and loose clothing away from these pinch points. If your arms, hands or your clothing is caught, you may be hurt.**

#### **CAUTION!**

**The warning labels on the lift are there for the safety of the operator. If the labels are worn or missing, replace them**

#### **WARNING!**

**If a pneumatic fitting becomes loose or if a pneumatic hose breaks, the air will escape from the system under pressure. If the lift is elevated when this happens, it will drop very quickly. Someone may be hurt or the product or the lift may be damaged.**

### Routine Periodic Maintenance

Every month:

Visually inspect the leg rollers, center pivot bushings and the upper and lower hinge pins and bushings.

Apply oil or WD-40 to all parts listed above.

Note: Although the bearings are "lifetime lubricated," their performance may be extended by additional periodic lubrication (WD-40).

Every six months:

Check all of the pneumatic fittings and hoses and repair the connections if necessary. Occasionally, the fittings can be worked loose by vibrations from the lift.

### TROUBLESHOOTING

All service should be done by qualified personnel. Qualified personnel should be able to read and understand wiring and hydraulic diagrams. They should be able to troubleshoot circuits safely and in accordance with accepted practice. FOR SAFETY'S SAKE, if in doubt, please contact your dealer or Southworth Products Corporation Customer Service Department at (207) 878-0700 or (800) 743-1000.

Before servicing the lift, read and understand this entire section and the section entitled "Operating Instructions."

Before working on the lift be sure to insert any and all maintenance devices. Failure to do so may result in damage to the machine and severe personal injury!

#### **The lift fails to elevate:**

1. The machine may be overloaded. Check the actual weight of the load. The rated capacity of the machine is shown on the table skirt.
2. Check the air supply to see if it has enough pressure. Using an external lifting mechanism, such as a crane or a fork lift. Raise the lift and insert the maintenance devices.
3. Check the lines in the airbag for leaks.
4. If the lift raises but does not raise completely, you may have to check the psi setting on the gauge at the supply line.

#### **The lift elevates, but fails to hold the load:**

Before working on the lift, be sure to insert any and all maintenance devices. Failure to do so may result in damage to the lift and severe personal injury!

1. The line going between the lift and the control, (if equipped) the relief valve or up/down control valve may be leaking. Dirt on the valve seat will prevent the valve from closing fully. Contact the local distributor or Southworth Products for assistance.

#### **The lift fails to lower:**

Before working on the lift, be sure to insert any and all maintenance devices. Failure to do so may result in damage to the lift and severe personal injury!

1. Be sure lever is connected and adjusted to actuate the down (exhaust) valve (if equipped).
2. Make sure nothing is blocking the lift from lowering.

If the steps listed above do not solve the problem, please call the Customer Service Department at Southworth Products Corp at (207) 878-0700 or (800) 743-1000.

## ORDERING REPLACEMENT PARTS

Southworth has carefully chosen the components in your lift to be the best available for the purpose. Replacement parts should be identical to the original equipment. Southworth will not be responsible for equipment failures resulting from the use of incorrect replacement parts or from unauthorized modifications of the machine.

Southworth will gladly supply you with replacement parts for your Southworth lift. With your order, please include the model number and the serial number of the lift. You may find these numbers on the nameplate, which is located on the crossbar at the base of the cylinder(s). When you are ordering parts for a cylinder, also include the cylinder number. This is stamped on the base of the cylinder housing.

To order replacement parts, please call the Parts Department at (207)878-0700 or (800)743-1000. Parts are shipped subject to the following terms:

- FOB factory
- Returns only with the approval of our parts department
- Payment net 30 days (except parts covered by warranty)
- Freight collect (except parts covered by warranty)

Parts replaced under warranty are on a “charge-credit” basis. We will invoice you when we ship the replacement part, then credit you when you return the worn or damaged part.

## 2 YEAR WARRANTY

Southworth Products Corp warrants this product to be free from defects in material or workmanship for a period of **2 years** of single shift usage from date of shipment, providing claim is made in writing within that time period. This warranty shall not cover modified designs for special applications, failure or defective operation caused by misuse, misapplication, negligence or accident, exceeding recommended capacities, failure to perform required maintenance or altering or repairing, unless alteration is authorized by Southworth Products Corp. Except as set forth herein, there are no other warranties, express or implied, including the warranties of merchantability and fitness for a particular purpose, all of which are hereby excluded.

All **batteries have a 90 day parts and labor** warranty, this warranty covers any defects in material and workmanship from the date of shipment.

Southworth Products Corp makes no warranty or representation with respect to the compliance of any product with state or local safety or product standard codes, and any failure to comply with such codes shall not be considered a defect of material or workmanship under this warranty. Southworth Products Corp shall not be liable for any direct or consequential damages arising out of such noncompliance.

Southworth Products Corp's obligation under this warranty is limited to the replacement or repair of defective components at its factory or another location at Southworth Products Corp's discretion. This is buyer's sole remedy. Except as stated herein, Southworth Products Corp will not be liable for any loss, injury or damage to persons or property, nor for direct, indirect, or consequential damage of any kind, resulting from failure or defective operation of said product.

This warranty may be altered only in writing by Southworth Products Corp, Portland, Maine.
